DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-6, 8, 9, 12-19 and 21-25 are rejected under 35 U.S.C. 102(e) as being anticipated by U.S. Patent Application Publication No. US2004/00129221 Hidaka et al. ("Hidaka" hereinafter). Referring to claims 1 and 14, Hidaka discloses a locking mechanism (see Figs. 4 and 5) for coupling and uncoupling a removable component (400) coupleable to and from a computer device, comprising a first member (402/403, i.e., combined pivoting unit) selectively positionable between secured and unsecured configurations of the removable component with respect to the computer device (see Figs 9-10), and a second member or engaging member (501) positionable between first and second configurations (see Figs. 18-20), wherein the first configuration extends the second member (501) through the first member (402/403), i.e., at lock part receiving recess (426) of element (403), in the secured configuration to secure the first member.

Referring to claims 2 and 15, Hidaka discloses a locking mechanism as claimed, comprising a pivotable member (503) configured to actuate the second member (501) selectively between the first and second configurations, and wherein the pivotal movement of the pivotable

Art Unit: 2835

member actuates the engaging member along a longitudinal axis of the engaging member (see Figs. 18-20).

Referring to claims 3 and 22, Hidaka discloses a locking mechanism as claimed, wherein the removable component is a hot-pluggable device. See Fig. 17, which shows components 400 individually removable for "hot-pluggable" usage.

Referring to claim 4, Hidaka discloses a locking mechanism as claimed, wherein the first member (402/403) comprises a lever (402) pivotably coupled to the removable component. See paragraph 0055.

Referring to claim 5, Hidaka discloses a locking mechanism as claimed, wherein the pivotable member (503) is a knob (520) coupled to the removable component (i.e., via locking assembly 500). See Figs. 4 and 18.

Referring to claim 9, Hidaka discloses a locking mechanism (see Figs. 4 and 5) for coupling and uncoupling a removable component (400) coupleable to and from a computer device (300), comprising a leveraging member (402/403) configured to at least partially disengage a removable component with respect to a computer device, an engaging member (501) selectively positionable in first and second positions such that the engaging member at least partially engages with the leveraging member in the first position, i.e., at a lock part receiving recess (426) of element (403), and a pivotable member (503) coupled to the engaging member such that pivotal movement of the pivotable member actuates the engaging member along a longitudinal axis of the engaging member. See Fig. 18 and paragraphs 0098-0106.

Art Unit: 2835

Referring to claim 12, Hidaka discloses a locking mechanism as claimed, wherein the pivotable member (503) and the leveraging member (402/403) are coupled to the removable component (400), i.e., via the locking assembly 500 (see Figs. 4 and 18).

Referring to claim 13, Hidaka discloses a locking mechanism as claimed, wherein the engaging member (501) in the first position extends through the leveraging member (402/403), i.e., at a lock part receiving recess (426) of element (403). See Figs. 18-20.

Referring to claims 16-19, Hidaka discloses a locking mechanism as claimed. See paragraph 0004.

Referring to claim 21, Hidaka discloses a locking mechanism as claimed, wherein at least one of the first member (402) and the engaging member is coupled to the removable component.

See Fig. 7.

Referring to claims 23-25, the method steps are necessitated by the device disclosed in Hidaka.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 20 is rejected under 35 U.S.C. 103(a) as being unpatentable over Hidaka in view of U.S. Patent No. 6,728,099 to Tsang et al. Hidaka discloses the device as claimed, including a cooling device (311). Hidaka does not disclose the cooling device as removable component.

Tsang et al. disclose a system having removable cooling components (see Figs. 3 and 4). It

Art Unit: 2835

would have been obvious to one of ordinary skill in the art at the time of the invention to modify the device of Hidaka to include selectively removable cooling devices, as taught by Tsang et al., since said cooling units are easier to repair and/or replace as needed.

Response to Arguments

Applicant's arguments filed July 11, 2005, regarding claims 1, 9, 14 and corresponding method claim 23 have been fully considered but they are not persuasive. As indicated in the above rejection, the locking mechanism of Hidaka does in fact teach a second member (501) extending through a first member (402/403), since the second member passes through the lock part-receiving recess (426) of element (403) of the first member. Applicant indicated that the "restriction lever" 501 is "located behind" an operation button 407 to prevent the button's inward actuation. While the Examiner agrees with Applicants understanding of the Hidaka "operation button," this does not preclude the "restriction lever" (501) serving as a second member that extends though the first member (402/403) at the recess (426).

Applicant's argument with respect to claim 20 is moot in view of the Examiner's response to the arguments relating to claim 14.

Applicant's arguments, however, with respect to claims 6, 8, 10 and 11 have been fully considered and are persuasive. The rejection of claims 6, 8 and 10 has been withdrawn.

Allowable Subject Matter

Claims 6, 8, 10 and 11 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. The following is a statement of reasons for the indication of allowable subject matter: referring to claims 6 and 10, upon reconsideration, the specific

Art Unit: 2835

limitation of the locking mechanism including a pivotable member configured to transition the removable component selectively between an operational configuration and a dormant configuration, in combination with the remaining elements or steps, is not disclosed or taught by the prior art references. Claims 8 and 11, depend from claims 6 and 10, respectively, and are therefore allowable for at the same reasons.

Claim 26 is allowed. The following is an examiner's statement of reasons for allowance: the newly filed claim includes the specific limitations pertaining to the allowable subject matter mentioned above.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Anthony Q. Edwards whose telephone number is 571-272-2042. The examiner can normally be reached on M-F (7:30-3:00) First Friday Off.
